Education

VIT Bhopal University — Bhopal, India
Bachelor of Science in Computer Science – Specialization in Gaming Technology — *Expected Sep 2028*

- Relevant Coursework: Software Engineering Principles, Data Analytics, Data Structures & Algorithms (C++), Fundamentals of AI/ML, Computer Architecture & Organisation, Operating Systems, Machine Learning (Python)

Gyandeep High School — Senior Secondary
Class XII – 80% — *2022 – 2024*

St. Karen's High School
Class X – 94% — *2011 – 2022*

Projects

Real-Time Chat Application | *React.js, WebSocket, Flask, PostgreSQL, JWT*

- Engineered a scalable real-time messaging platform achieving **99.5% uptime** with support for **10,000+ concurrent users**, demonstrating production-grade reliability.
- Implemented secure user authentication using **JWT** and Flask, enforcing data privacy and access control best practices.
- Optimized **WebSocket** connection handling to reduce end-to-end message delivery latency by **30%**, improving user experience at scale.

E-Commerce Data Pipeline | *Python, Django, AWS, Docker, RESTful APIs*

- Architected and automated end-to-end data ingestion pipelines for large-scale e-commerce datasets, cutting processing time by **40%** through parallelization and pipeline optimization.
- Designed and deployed containerized **RESTful APIs** using Docker to integrate third-party payment services, improving system modularity and extensibility.
- Leveraged **AWS** cloud infrastructure for scalable, fault-tolerant deployment of data processing workloads.

Financial Statement Analyzer | *Python*

- Built a tool that ingests raw company financial statements and automatically computes key financial ratios across Profitability, Liquidity, and Leverage dimensions to support data-driven analysis.
- Designed modular ratio calculation components enabling rapid extension to support additional financial metrics.

Technical Skills

Languages: Python, C++, TypeScript
Frameworks & Libraries: React.js, Angular, Node.js, Flask, Django, TensorFlow
Tools & Platforms: Docker, AWS, PostgreSQL, GitHub Actions, Git
Concepts: Microservices Architecture, Machine Learning, RESTful API Design, Agile Development, WebSockets, JWT Authentication, CI/CD Pipelines

Relevant Areas of Knowledge

AI / ML: Supervised & Unsupervised Learning, Neural Networks, TensorFlow, Python for AI
Systems: Operating Systems, Computer Architecture & Organisation, Data Structures & Algorithms
Software Engineering: Agile Methodology, System Design, Microservices, DevOps Practices
Data: Data Analytics, Database Design (PostgreSQL), Pipeline Architecture
